

## Cauning only DIUS Surer

- 1). It resolv s quencs
- 2). It performs 2 tusks a resolving queves and acuting the result
- 3). It does not forward quenes to the next DSN server
- W truses both recursive and non recursive queres

## Forwarding DNS server

- 1). It DOES NOT resolve queres
- 2). It performs only one task carried the results
- 3). It forwards queres to the
- 4) It uses only recursive quenes

Disaster Recovery Sites: HOT, WARM, LOUD

- \* fully redundant equipment / nard were
- \* network connective-
- \* Neur real-time data synchronized
- \* Failover occurs within nows / day
- \* MOST expensive

- \* equipment/nardwire parkally set up
- \* Nerwork connectivity established
- \* Daily or weekly dard synchronization
- \* Failurer occurs within naus/day
- & Lost efective

- \* Little rno equipment/ nar ware
- NO connectivity
- \* No buckup / No data synchronization
- Not ready for failover
- \* ULAST expensive
